LENGTH OF CONTRACT
18+ Months

Problem

The client was struggling to find niche technologists to build-out their Digital Health Organization. The Digital Health Organization needed four Agile Product Development teams consisting of a Human Factors Engineer, Product Manager, Mobile Developers and Full-Stack Engineers.

Solution

After filling the first two roles within a week, Dexian made strides and placed multiple part and full-time consultants within a 36-month period.

Outcome

The three-year project was completed on time and almost all consultants received contract extensions. Because of the success of this project, Dexian was asked to help with the next project on deck: AWS Cloud Migration.
